# Dhruvkumar Prajapati

**Cybersecurity + AI Analyst · SOC Operations**

Hamilton, ON · github.com/dhruv97270
dhruv97270@gmail.com
linkedin.com/in/dhruvkumar-prajapati-197b84229

## SUMMARY

Security-operations-focused analyst with a postgraduate credential in Cyber Security Analytics and a second in Artificial Intelligence. Comfortable with the core SOC duties: log monitoring, alert triage, threat detection, incident escalation and reporting, phishing and malware analysis, and network fundamentals, with hands-on Splunk and Elastic experience. The AI background adds an edge for anomaly detection and spotting unusual patterns in large volumes of log data.

## TECHNICAL SKILLS

**SIEM & Log Monitoring:** Splunk (SPL), Elastic / Kibana, KQL, log correlation, alert tuning, dashboards

**Detection & Response:** Alert triage, threat detection, incident escalation and reporting, IOC analysis, MITRE ATT&CK

**Phishing & Malware:** Email header analysis, attachment and URL checks, basic malware behaviour analysis

**Network & Endpoint:** Network fundamentals, Wireshark, Snort, IDS/IPS, Windows Event Logs, Linux logs, EDR basics

**Tools & Scripting:** VirusTotal, AbuseIPDB, threat intel feeds, ticketing / case notes, Python, Bash basics

## EDUCATION

**Postgraduate Certificate, Cyber Security Analytics** — Mohawk College, Hamilton, ON *2022 – 2023*
*Threat intelligence, network forensics, vulnerability assessment, IDS/IPS, security policy, risk management*

**Postgraduate Certificate, Artificial Intelligence** — Georgian College, Barrie, ON *2023 – 2024*
*Machine learning, neural networks, model deployment, Python (scikit-learn, TensorFlow)*

**Bachelor of Computer Science** — Sankalchand Patel University, India *2017 – 2021*
*Data structures, operating systems, network protocols, databases*

## CERTIFICATIONS

TryHackMe SOC Level 1

## HANDS-ON & PROJECTS

**TryHackMe SOC Level 1 Path** — hands-on blue-team training
*Alert triage · SIEM (Splunk, Elastic) · phishing analysis · network traffic analysis · MITRE ATT&CK · malware concepts*

- Monitored logs and triaged security alerts in Splunk and the Elastic Stack, sorting real threats from false positives and following a standard triage workflow.
- Analysed reported phishing emails by checking headers, sender details, links, and attachments to decide whether the activity was malicious.
- Reviewed network traffic in Wireshark and looked at common malware behaviour to spot suspicious connections and pull out indicators of compromise (IOCs).
- Wrote up findings and escalation notes, and finished the capstone challenges (Monday Monitor, Friday Overtime, Retracted) by connecting SIEM logs, packet captures, and endpoint events, mapping activity to MITRE ATT&CK, the Cyber Kill Chain, and the Pyramid of Pain to trace each attack end to end.

**LetsDefend** — SOC analyst practice (blue-team simulation)
*SOC monitoring · alert investigation · email/phishing analysis · EDR · log management · case handling*

- Worked alerts off the monitoring queue in LetsDefend's simulated SOC (phishing, malware, and EDR alerts), investigated each one, decided true or false positive, and closed cases with documented findings.
- Followed the standard triage loop: pulled related logs, checked hashes, IPs, and URLs against threat intelligence, and escalated confirmed incidents.

## EXPERIENCE

**Store Manager** — BigBear Foodmart, Hamilton, ON *Sep 2024 – Present*

- Handle day-to-day IT for the store: user accounts and access, password resets, device troubleshooting, and escalating issues to vendors when needed.
- Led the rollout of a new analytics platform from vendor selection to go-live, set up its access controls, trained staff, and logged and resolved IT issues with clear root-cause notes.

**Software Developer** — Nivaan Infotech, Vishnagar, India *Jan 2021 – Aug 2022*

- Built Python and SQL backends and REST APIs on Linux, and applied secure-coding practices such as input validation, parameterized queries, and least-privilege access.
